

## DELEGATE BIOGRAPHY

### Italy - Delegate Biography

<b>First Name</b>	Giusy	
<b>Last Name</b>	Tomarchio	
<b>Title/Position</b>	Dr/	
<b>Affiliation</b>	STMicroelectronics	
<b>Email</b>		

She completed her degree in Automation with a thesis on Environmental Sensors in 1999 and joined ST Microelectronics a few months later. She has obtained vast experience in industrial management by covering different positions within the supply chain, and working with all the main functions of the Company: Sales, Manufacturing, Divisions, R&D and ICT. A few years ago she moved into the R&D domain, responsible for strategic programs and capital investment. She is currently working for the ST's application lab, in charge of business development, and contributes to the company initiative to support local Small Enterprises and Universities through regional programs in the framework of 2014-2020 programs.

Along her professional path she also earned a PhD with a published thesis on "Dynamics between the Financial Market and Industry as Agents in a Complex Network", participating in international conferences and summer school programs. In her free time, she actively seeks out experiences that take her outside of her comfort zone, such as running in the New York Marathon and sailing. Over the last 2 years, she has extended her competencies by investigating innovation processes and start-up business models, founding in 2013 a non-profit organization devoted to supporting innovation in the Mediterranean. In March 2014, she organized an international conference on "Disruptive Innovation", and her dream is to create a place where innovators can meet to co-create value for society in green and biomedical applications.
